

### **Abstract of the Disclosure**

A golf club head which has a head volume  $V$  of not less than 300 cc, and a gravity point distance  $C$  (mm) satisfying the following condition:  $C \leq 0.12 \times V^{-0.8}$ , and optionally, the ratio  $(M/V)$  of the moment of inertia  $M$  ( $\text{g} \cdot \text{sq.cm}$ ) of the club head around a vertical axis passing through the gravity point of the club head to the head volume  $V$  (cc) is set in a range of from 9.0 to 11.0, and a sweet spot height is set in a range of from 25 to 40 mm.
